

Ft Myers plots, buy them, tuck them away it's a developable plot of ¼ acre in sunny Florida not expensive.

Due to the fantastic success of our last sale of land plots we are pleased to announce that we have secured a limited amount of additional lots for sale

If you believe that history will repeat itself, now is the time to buy real estate. Real estate has proven to be the safe haven during the past 5 recessions/stock market crisis. Plus, in times of inflation, owning real estate has always proven to be the “best” vehicle. Many well know economists, firmly believe we are headed for a significant period of inflation.

A golden opportunity to buy your very own piece of the “Sunshine state” in the USA, priced from just \$5300 for a ¼ acre building plot this will get you ahead of the game when the market recovers.

Back in 2005 these plots were selling for between \$30-45k whilst we do not foresee a return to these dizzy levels with construction resuming these make the ideal buy and hold investment or even presents for friends and family.

The yearly cost of owning a plot will be £100 property tax per year.

This is a golden opportunity we have limited availability at this price and working with one of our bank contacts who wants to sell them on to remove from their asset register.

Please see link of video on the land plots

Lots similar to these have recently achieved at auction anywhere upwards of \$6-8K some even fetching \$11k.
